

Momentry Studio Brochure

From file-based search to moment-based intelligence

Application Scenarios

Media & Production: Quickly find materials and improve editing efficiency

Government & Archives: Search historical audio-visual materials

Enterprise Knowledge: Build audio-visual knowledge bases

Security & Surveillance: Locate events and incidents in seconds

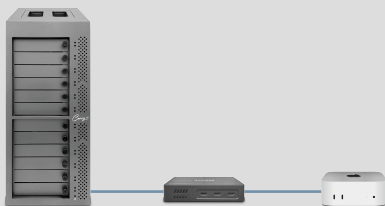

Solution Advantages

- Faster content discovery
- Greater media reuse rate
- Lower operational workload
- Faster insights and decisions

How It Works

1. Enter a question or keyword
2. Momentry finds relevant moments
3. Select a result
4. Jump directly to the exact scene

Search instantly — without tagging, logging, or manual organization.

The Challenge

Media content is growing rapidly, but finding the right moments is still slow and inefficient.

- Teams spend countless hours manually browsing footage.
- Valuable content often remains unused.
- Traditional workflows are slow and inefficient.

Organizations own massive amounts of content, yet struggle to unlock its value.

Key Shift

What if videos could be searched like text?

What if a single sentence could instantly locate the exact moment inside a video?

Why Momentry

Momentry transforms media search from file-based browsing into moment-based intelligence.

- AI understands video content.
- Search results are precise time segments.
- Click to play instantly.

From File-Based Archives → Moment-Based Intelligence

Deployment & Integration

Momentry provides a complete deployment workflow:

- System deployment and setup
- Text and video corpus ingestion and indexing
- Search optimization and model adjustment
- Workflow and UI customization

Supports phased import and continuous optimization.
